Accessories for the SMART Board interactive whiteboard

Fact Sheet

Now you have more ways than ever to customize your SMART Board™ interactive whiteboard. Use accessories from SMART to adjust the height of your interactive whiteboard, make it mobile, add sound or even transform it into an integrated system.

You can adapt your 500 or 600 series board, or 600i system to suit the specific needs of your classroom. These time-saving, value-added accessories are useful extras that will enhance your SMART product.

Height-adjustable wall mount

With this wall mount, you can adjust your SMART Board 600i interactive whiteboard system by 20 inches (50 cm). Lower it so your shorter students can reach it, or raise it up for teachers and taller students. The system locks at its highest position, keeping it out of reach when it isn't in use. The easy-glide lifting and lowering mechanism is enclosed for safe operation.

GoWire SMART Notebook software auto-launch cable

Get going faster with the GoWire™ SMART Notebook software auto-launch cable. This USB cable launches SMART Notebook software automatically. You get full access to the software's tools and features in seconds without having to pre-install the software.

USB speakers

Make a sound decision – add audio to your SMART Board interactive whiteboard. This speaker system consists of two 14-watt, stereo-amplified speakers, with a two-port USB hub and volume control, which mount to the interactive whiteboard or the wall. Just one cable connects the speakers to the board, so there are fewer cables to manage.

Wireless Bluetooth connection

Use Bluetooth® technology to eliminate cables running between your computer and your SMART Board interactive whiteboard.

Mobile floor stand

Using this mobile, height-adjustable floor stand with heavy-duty locking casters and stabilizing safety guards, you can move your SMART Board interactive whiteboard from classroom to classroom.

SystemOn expansion module

Turn on your computer, projector and interactive whiteboard with the push of a button using the SystemOn expansion module. It can be added to the expansion slot on the pen tray of your SMART Board interactive whiteboard.

Floor stand for the 600i

This floor stand allows you to install the SMART Board 660i or 680i interactive whiteboard system in any classroom. It's the ideal solution for spaces where permanent mounting is not feasible or where temporary installation is preferred. The floor stand is sturdy and secure, and offers two convenient setup options – either free-standing on the floor or tethered to a wall.

RS 232 module

Use the RS 232 module to conveniently convert your USB connection into a serial connection, instantly.

USB extenders

With SMART's active USB extender, you can increase the reach of your USB cable by 16 1/2–66 feet (5–20 m). For even longer distances or installations that require the use of fire-resistant, plenum-rated cable, the CAT 5 USB extender is an affordable solution. This extender increases the distance between the interactive whiteboard and the USB connection by up to 120 feet (36.6 m).

SMART Pointers

Easily enable students and teachers to reach the entire surface of a SMART Board interactive whiteboard or interactive display with a set of four colorful pointing tools. Each pointer is 15 1/2 inches (39.3 cm) long, with a finger-shaped tip that allows students to access and control computer applications.

The UF55 projector kit

The UF55 projector kit offers a convenient and economical way to transform SMART Board 500 or 600* series interactive whiteboards into integrated systems. The kit combines a board with a projector and control panel. The short-throw, high-offset UF55 projector reduces shadows cast onto the interactive whiteboard and offers a bright image at 2,000 lumens, XGA resolution and true color quality.

From the control panel, you can start the projector and interactive whiteboard with a single button and can switch between multimedia devices, such as laptops and DVD players. The projector is simple to install and easy to maintain because it doesn't use a filter.

For classrooms that prefer wide-format, SMART offers a wide-screen projector, the UF55w that is compatible with our wide-format board, the 685. The UF55w has a bright image at 2,000 lumens, WXGA resolution and true color quality.

*The compatible models include the 560, 580, 660, 680 and 685.
